

RIVO MULTITRADE OPTICAL SYSTEMS

100Mbps fiber optic connector for the switch

Overview

MCSEAAF1LFS00 - fiber optic adaptor, Modicon Networking, SFP module, for Ethernet switch, 100 BASE-SX, single mode.

Key Takeaways

A 100Mbps fiber optic connection to a switch typically uses a 100BASE-FX SFP transceiver over multimode fiber, supporting distances up to 2 km with full-duplex operation. Key Components

- 100BASE-FX SFP Transceiver
- Converts electrical Ethernet signals to optical signals and vice versa.
- Operates at 1310nm wavelength over multimode fiber.
- Supports full-duplex 100Mbps communication.
- Hot-swappable, allowing installation without powering down the switch .
- Fiber Optic Cabling
- Multimode fiber (MMF) is commonly used for 100BASE-FX links.
- Duplex fiber is required, with separate strands for transmit and receive signals.
- LC connectors are standard for SFP modules; ensure proper termination or use pre-terminated patch cables .

- Maximum distance is typically 2 km, depending on fiber quality and link budget .
- Switch Requirements
- The switch must have SFP ports compatible with 100BASE-FX modules.
- Ensure the SFP module matches the fiber type (single-mode or multimode) and wavelength specifications .
- For multiple switches, consider a star topology for optimal performance and minimal collisions .

Installation Best Practices

- Check Compatibility: Use SFP modules certified for your switch model to ensure proper operation and recognition.
- Correct Fiber Pairing: Connect the transmit (TX) of one switch to the receive (RX) of the other and vice versa.
- Avoid Exceeding Distance Limits: Ensure the fiber length does not exceed the SFP module's rated distance to prevent signal degradation.
- Secure Cabling: Route fiber carefully to avoid sharp bends, kinks, or physical damage.
- Test the Link: Use optical power meters or switch diagnostics to verify signal strength and link stability.

Advantages of Fiber over Copper

- Longer Reach: Extends beyond the 100m limitation of copper Ethernet.
- EMI Immunity: Resistant to electromagnetic interference, ideal for industrial or noisy environments.
- Security: Fiber does not emit signals, reducing the risk of eavesdropping.
- Future Scalability: Existing fiber infrastructure can support higher-speed upgrades with compatible SFP modules . By following these guidelines, you can establish a reliable 100Mbps fiber optic connection between switches or other network devices, ensuring stable performance and long-term scalability.
