Are there multimode fiber optic cables

Overview

Fibre cables vary enormously, in the type of fibre, the construction and materials and the number of fibres present.

Key Takeaways

Yes, multimode fiber optic cables are widely available in various types and specifications for short- to medium-distance communication applications. Overview of Multimode Fiber

Multimode fiber (MMF) is designed for transmitting data over short distances, such as within buildings, campuses, or data centers, and supports high-speed communication up to 800 Gbit/s . Unlike single-mode fiber, multimode fiber has a larger core diameter (typically 50 or 62.5 microns), allowing multiple light modes to propagate simultaneously, which makes it ideal for high-capacity, short-range networks .

Types of Multimode Fiber

Multimode fibers are classified according to the ISO 11801 standard into several types:

- OM1: 62.5 μm core, supports 10 Gigabit Ethernet up to 33 meters, typically uses LED light sources, and has an orange jacket .
- OM2: 50 μm core, supports 10 Gigabit Ethernet up to 82 meters, also LED-based, with an orange jacket .

- OM3: 50 µm laser-optimized fiber, supports 10 Gigabit Ethernet up to 300 meters, and 40/100 Gigabit Ethernet up to 100 meters, with an aqua jacket .
- OM4: Backwards compatible with OM3, supports 10 Gigabit Ethernet up to 550 meters, optimized for VCSEL lasers, also with an aqua jacket .
- OM5: Standardized for wavelength-division multiplexing (WDM), supports multiple wavelengths from 850 to 953 nm, designed for high-speed, short-distance applications .

Applications

Multimode fiber is commonly used for:

- Building and campus backbone networks
 - Data centers for 1G, 10G, 40G, and 100G Ethernet connections
 - Fiber to the desktop or telecom enclosures
 - High optical power applications, such as laser welding or spectroscopy equipment
- Availability and Purchasing

Multimode fiber optic cables are commercially available from multiple vendors. For example, Mouser Electronics offers a wide range of multimode fiber cables, including OM1-OM5 types, with various jacket colors and configurations suitable for different deployment scenarios . Other suppliers and manufacturers also provide multimode fiber for both enterprise and industrial applications. In summary, multimode fiber optic cables are readily available, come in multiple types to suit different bandwidth and distance requirements, and are widely used in short- to medium-range high-speed networking environments.
