

RIVO MULTITRADE OPTICAL SYSTEMS

Cost of relocating optical distribution box

Overview

How to calculate the cost of relocating a mobile optical In this guide, we'll walk you through the essential steps on how to accurately calculate commerci.

Key Takeaways

Relocating an ONT (optical network termination) typically costs around £98 if done professionally, with DIY relocation kits available for self-installation.

Professional Relocation Costs

If you hire a professional service to move your fibre broadband ONT, the standard fee charged by Openreach for FTTP (fibre to the premises) equipment relocation is approximately £98 . This fee covers the technician's visit and the physical relocation of the ONT to a new location within your property. For older connections like ADSL or FTTC, moving a master socket may cost around £130 . Typically, the move is quick, and most providers do not supply a temporary 4G box unless you have a specific service plan that includes automatic backup.

DIY Relocation Kits

For those who prefer a self-installation approach, Fibre Termination Point Relocation Kits are available from suppliers like Premitel . These kits include:

- A wall box to house the ONT and spare fibre cable (usually accommodating about 2 metres of loose cable)
- Fibre extension cables of varying lengths to reach the new location

- Instructions for installation compatible with standard ONT units connected via a single green plug

The cost of these kits varies depending on the cable length and additional wall boxes required, but they generally provide a more affordable alternative to professional relocation, especially if you are comfortable with basic installation. Carriage is often included for UK addresses .

Additional Considerations

- Labour and access: If the relocation requires complex routing or drilling, professional installation may incur extra charges.
- Temporary connectivity: Most standard relocations do not include a temporary 4G box unless your provider offers a backup service.
- Planning: Measure the distance and check for obstacles to ensure the kit or technician can accommodate the new location.

In summary, expect to pay around £98 for a professional ONT relocation, or invest in a DIY relocation kit for a potentially lower cost, depending on your installation needs and comfort level with handling fibre equipment .
