

RIVO MULTITRADE OPTICAL SYSTEMS

Custom-made fiber optic splice closures

Overview

Fiber Optic Splice Closures | Sealed and High-Density AFL offers robust fiber optic splice closures—including Apex® high-density and LightGuard® weathertight.

Key Takeaways

Custom fiber optic splice closures can be tailored in design, materials, and modular components to meet specific installation, environmental, and network requirements. Overview of Fiber Optic Splice Closures

Fiber optic splice closures (FOSCs) are devices used to connect and protect multiple fiber optic cables while safeguarding splices from environmental hazards such as moisture, dust, and temperature fluctuations. They are essential in PON, FTTx, and long-distance network deployments, supporting branching, mid-span access, and capacity expansion. Closures come in various forms, including dome closures (single-end entry), inline closures (dual-end entry), and hybrid designs that integrate patch panels for preterminated cables.

Customization Options

Custom processing of FOSCs involves adapting standard closures to meet unique spatial, technical, or industry-specific requirements:

- **Housing Geometry:** Modifying shapes for confined spaces, low ceilings, or angled connections.
- **Material Selection:** Using antistatic, chemical-resistant, or fire-retardant materials for specialized environments.

- Color Coding: Aligning with corporate design or industry-specific identification.
 - Modular Components: Adjusting tray types, port configurations, and subrack layouts using systems like VarioConnect, SlimConnect, or EasyConnect to accommodate unusual fiber types or high-density splicing .
 - Sealing Methods: Choosing between mechanical or heat-shrink seals to ensure IP68-level protection and long-term reliability .
- Production and Assembly Process

The production of a custom FOSC typically follows these steps :

- Design and Mold Fabrication: Using CAD to create molds from aluminum or steel, tailored to the closure's geometry and component layout.
- Material Preparation: Selecting appropriate plastics (PP, ABS, PC) and accessories based on environmental and mechanical requirements.
- Injection Molding: Forming a seamless, water-tight closure by injecting liquid plastic into the mold and allowing it to solidify.
- Component Assembly: Installing fiber optic cables, splice trays, connectors, and sealing materials inside the molded closure.
- Quality Control: Conducting pressure tests, visual inspections, and other evaluations to ensure durability, sealing integrity, and compliance with industry standards.
- Packaging and Delivery: Using protective packaging to ensure safe transport to the installation site.

Fiber Management and Splicing Considerations

Inside the closure, fiber management is critical to prevent stress or damage :

- Properly strip cable jackets and secure strength members.
- Arrange fibers in trays without pinching or excessive bending.
- Ground metallic components and shielded fibers as required.
- Ensure sufficient fiber length for splicing and storage in trays.

Benefits of Custom Processing

Custom FOSCs provide several advantages:

- Optimized fit for challenging installation environments.
- Enhanced protection against environmental and mechanical stress.
- Scalability for future network expansion.

- Compliance with industry-specific standards and operational requirements. By combining modular design, material customization, and precise assembly, custom fiber optic splice closures ensure reliable, long-term network performance even in demanding applications .

The FOA Reference For Fiber Optics

These are often used with fiber to the home (FTTH) networks where drop cables to individual subscribers are factory made

Fiber Optic Splice Closure — Dome & Inline | TTI Fiber

Internal splice trays are organized for ribbon or individual fiber splicing, with clear fiber routing paths, heat-shrink splice protector

Fiber Optic Splice Closures (FOSC)

The fiber splice closures deliver proven reliability, flexibility and environmental protection for FTTH networks, supporting applications

Apex® Fiber Optic Splice Closures

AFL Apex Fiber Optic Splice Closures: High-Density and Reliable delivers high-performance engineering, reliability and simplified

Splice Technologies, Inc. | Innovative Fiber Optic Products

Splice Technologies, Inc. is a leading USA manufacturer of the industry's highest quality, reliability, and most extensive offering of

Fiber Splice Closures & Pedestals Made in the USA

Fiber optic splice enclosures made in the USA are ideal for Campus LANs, Data Centers and Entrance Facilities, a complete and

Fiber Optic Cable and Splice Closure Solutions | Corning

Corning offers optimized pairings of fiber closures and cable types to help you decide what's essential to your network's set up.

Fiber Distribution & Repair Closures (FDRC) | Small Splice Closure ...

Amphenol Charles Industries (ACI) Fiber Distribution & Repair Closures (FDRC) are very compact units. They can be used as a

Apex® Fiber Optic Splice Closures Products

AFL's Apex line of fiber optic splice closures, designed for high-density splicing and reliable protection in various environments.

Fiber Splice Closures

We at Primus Cable offer the following Fiber Splice Closure and Fiber Splice Enclosure products: Fiber dome enclosures Fiber inline

Fiber Optic Splice Closures | Graybar Store

Shop Our Inventory Of Fiber Optic Splice Closures Online. Graybar Is Your Trusted Distributor For Fiber Optic Closures.

Basics of fiber optic closures and selection guide

Horizontal type fiber optic closure typically includes one or more fiber splice trays to provide space and protection for the fiber splices.

Fiber Splice Closure

Ribbon Fiber Optic Splice Sleeves This fiber optic splice sleeves are used for ribbon optical fiber fusion protection, its max capacity is

Fiber Optic Splice Closure, Electrical Cable Junction Box Manufacturer

Fiber optical splice closure is widely used in communication, network systems, CATV cable TV, optical cable network systems, and

Fiber Optic Splice Closure| Basics and Types| Adishwar Blog

A fiber optic closure connects and stores fiber optic cables safely, protecting them from external elements. Find out

What is fiber optic closure? | Sopto

Inside the closure, fiber optic cables are typically spliced or connected using fusion splicing or mechanical connectors.
