

Detailed Price List for Fire-Resistant Cable Trays in North Macedonia

More durable and robust

The outer layer is made of environmentally friendly PVC, which is soft and elastic. It can be stretched without damage, so you can use it with confidence.

Overview

Niedax offers complete and specific solutions for every application in the field of cable laying technology.

Key Takeaways

Fire-resistant cable trays typically range from €50 to €250 per meter, depending on material, fire rating, and supplier, with specialized epoxy or FRP trays at the higher end. Price Overview

The cost of fire-resistant cable trays varies widely based on material, fire rating, and design:

- Galvanized steel trays: €50–€120 per meter, suitable for standard industrial and commercial applications .
- Aluminum trays: €80–€150 per meter, lightweight and corrosion-resistant, often used in data centers or high-tech facilities .
- FRP (Fiber Reinforced Polymer) or epoxy-coated trays: €150–€250 per meter, offering superior fire resistance, corrosion protection, and long-term durability .

- Specialized fireproof trays (e.g., intumescent-coated or modular epoxy systems like Benarx): prices can exceed €200 per meter due to advanced fire protection and ease of installation .

Factors Affecting Cost

- Fire Rating: Trays certified for 60, 90, or 120 minutes of fire resistance are more expensive due to testing and material requirements .
- Material Choice: Steel is generally cheaper than aluminum or FRP, but FRP provides better corrosion and fire resistance .
- Tray Type: Ladder, solid-bottom, trough, or wire mesh designs influence cost; ladder trays are common for heavy-duty applications, while solid-bottom trays are used for sensitive cables .
- Supplier and Certification: Imported trays from Europe or Asia may include shipping and certification costs. Verified suppliers with UL, IEC, or DIN certifications may charge a premium .
- Project Scale: Bulk orders for industrial or commercial projects can reduce per-meter costs, while small orders may be more expensive.

Sourcing in North Macedonia

- Local distributors may stock galvanized steel and aluminum trays, often imported from Europe.
- International suppliers like NewReach, Cablofil, and Beerenberg provide specialized fire-resistant trays with global shipping options .
- Custom solutions (e.g., epoxy-coated modular trays) are available for critical infrastructure, data centers, or oil & gas facilities, but require direct quotes from suppliers.

Recommendation

For accurate pricing in North Macedonia, it is advisable to contact local electrical distributors or international suppliers with project specifications, including:

- Required fire rating (e.g., 60, 90, 120 minutes)
- Material preference (steel, aluminum, FRP, epoxy)
- Tray type and dimensions
- Quantity and delivery requirements This approach ensures compliance with local fire codes and optimizes cost-effectiveness while maintaining safety standards .
