

RIVO MULTITRADE OPTICAL SYSTEMS

Fiber Optic Cable Anti-Slip Device

Overview

The anti-rotational device provides a means of stringing fiber optic cable without introducing torsion stress.

Key Takeaways

Anti-slip and anti-rotational devices protect fiber optic cables from twisting and damage during installation, ensuring safe and reliable handling. Anti-Rotational Devices (ARD)

Anti-Rotational Devices (ARDs) are designed to prevent fiber optic cables from twisting as they pass over pulling blocks during installation. Twisting can permanently damage the delicate glass fibers inside the cable. ARDs use weighted attachments that hang vertically while stringing, keeping the device aligned and preventing rotation. These attachments collapse in line to allow smooth travel over pulling blocks. ARDs are suitable for fiber optic and OPGW cables and often include a 5,000 lb swivel to handle tension safely .

Anti-Slip Tools for Fiber Handling

For manual handling and preparation, fiber strippers with anti-slip handles provide a secure grip, reducing the risk of accidental slips that could damage fibers. These tools often feature rubberized grips, safety locks, and high-precision blades for stripping pigtails or bare fibers. Anti-slip handles improve control and safety during fiber processing, making them ideal for both professional and field use .

Benefits of Anti-Slip and Anti-Rotational Solutions

- Protects delicate fibers from twisting or breaking during installation.
- Reduces installation errors and downtime caused by damaged cables.
- Enhances safety for technicians handling high-precision fiber optic cables.
- Compatible with various cable types, including single-mode, multi-mode, and hybrid fiber optic cables .

Additional Considerations

When selecting anti-slip or anti-rotational solutions, consider:

- Cable type and diameter to ensure compatibility.
- Installation environment, such as aerial, underground, or industrial settings.
- Load capacity of the device or tool to handle tension without failure.
- Ease of use, including collapsible or ergonomic designs for field efficiency. Using these devices and tools ensures reliable fiber optic performance and minimizes the risk of costly cable damage during installation or maintenance.
