

RIVO MULTITRADE OPTICAL SYSTEMS

Fire-resistant optical cable

Overview

This innovative cable features a patented design that ensures functionality for over three hours in temperatures reaching 1000°C.

Key Takeaways

Fire-resistant optical cables are designed to maintain data transmission and operational integrity during fire, using specialized materials and construction to meet stringent safety standards. Key Features

Fire-resistant optical cables are engineered to continue functioning under extreme heat and flame exposure, ensuring uninterrupted communication in critical systems such as fire alarms, voice evacuation, and emergency networks . They typically feature:

- LSZH (Low Smoke Zero Halogen) sheaths to reduce toxic smoke and halogen emissions during fire .
 - Steel wire or corrugated steel tape armor for mechanical strength and protection against environmental hazards .
 - Gel-filled loose tubes or central strength members to protect fibers from mechanical stress and maintain optical integrity .
 - UV-stabilized and weather-resistant outer jackets for outdoor exposure .
- Fire-Resistance Standards

These cables comply with international fire safety standards, including:

- CPR Euroclass B2ca, Cca, Dca for European construction regulations .
 - FE180 for continuous operation under fire conditions .
 - IEC 60331-25 for circuit integrity during fire .
 - UL flame-listed certification for indoor and outdoor emergency systems .
- Applications

Fire-resistant optical cables are widely used in environments where maintaining communication during fire is critical:

- Tunnels, metro lines, and railway networks for safety and signaling .
- Hospitals and airports for emergency communication systems .
- Industrial plants and data centers to protect operational continuity .
- Public buildings and voice alarm systems to ensure evacuation and alert systems remain functional .

Performance Characteristics

- Continuous data transmission during fire, preventing operational collapse .
- Low smoke and zero halogen emissions to protect personnel and equipment .
- Mechanical durability against bending, impact, and environmental stress .
- High-speed data transmission over long distances with minimal signal loss .
- Flexible deployment for indoor/outdoor routes, vertical shafts, and tight bends .

Notable Products

- ETK Kablo B2ca fire-resistant fiber optic cables: Maintain optical integrity under extreme heat, low smoke, zero halogen, suitable for tunnels, hospitals, and industrial plants .
- Draka FireTuf cables: OM1, OM3, OM4 multimode and OS2 singlemode, compliant with IEC 60331-25 and IEC 60332-2-3-24C, ideal for fire alarm and voice evacuation systems .
- Lifeline™ QFCI cables by Prysmian: UL flame-listed, functional for over three hours at 1000°C, halogen-free, suitable for indoor and outdoor emergency systems .
- Optral CPR optical cables: Euroclass Dca, Cca, B2ca classifications, certified by UL, Bureau Veritas, and DNV . Fire-resistant optical cables are essential for ensuring safety, operational continuity, and compliance with international fire standards, making them a critical component in modern infrastructure and emergency systems.
