How long are the anti-corrosion cable trays in Sri Lanka

Overview

Shop Alu-Zinc Coated Cable Trays at Eastlink.lk – ideal for both indoor and outdoor cable routing with anti-corrosion protection.

Key Takeaways

Anti-corrosion cable trays in Sri Lanka typically come in standard straight lengths of 2 to 3 meters, depending on the material and manufacturer.

- **Hot-Dip Galvanized Steel Trays:** Commonly available in 2-meter or 3-meter straight lengths, with thicknesses around 1.5mm for industrial applications, providing excellent corrosion resistance and mechanical strength for indoor and outdoor use (Sys Rack, Cubicoan) .
- **Powder-Coated Trays:** These trays, designed for chemical and moisture resistance, are also generally supplied in 2-3 meter lengths, suitable for both commercial and industrial projects in Sri Lanka .
- **Aluzinc or Aluminum Alloy Trays:** Lightweight and corrosion-resistant, these trays are typically offered in 2-meter sections, ideal for harsh environments and outdoor installations .

Additional Considerations

- **Customization:** Many suppliers in Sri Lanka provide custom lengths upon request to fit specific project requirements, especially for large industrial or commercial installations .

- **Accessories:** Anti-corrosion trays often come with matching lids, bolted joints, and support brackets to facilitate secure installation and maintain structural integrity over long spans .
- **Standards Compliance:** Hot-dip galvanized trays comply with EN ISO 1461 and EN 61537 standards, ensuring a minimum coating thickness of 55–70 microns for long-term corrosion protection . In summary, most anti-corrosion cable trays in Sri Lanka are supplied in 2–3 meter straight lengths, with options for customization depending on project needs, material type, and environmental conditions. These trays are suitable for industrial, commercial, and outdoor applications, providing durable and corrosion-resistant cable management solutions.
