

How much does a corridor lighting distribution box cost

Overview

See typical tasks and time to install a lighting circuit, along with per unit costs and material requirements.

Key Takeaways

The cost of a corridor lighting distribution box typically ranges from £50 to £300 or more, depending on capacity, features, and materials. Price Range and Factors

The price of a lighting distribution box depends on several factors:

- Number of outlets or ways: Standard boxes are available in 2, 4, 6, 8, 10, or 12 outlets, with larger units costing more due to increased capacity and complexity .
- Material and build quality: Boxes made from robust materials like anodised aluminium or Zintec steel with powder coating are more durable and generally more expensive than basic plastic enclosures .
- Electrical rating: Most corridor lighting distribution boxes are rated around 16A, but higher-rated units for industrial or commercial use may cost more .
- Additional features: Options like DALI compatibility, modular expansion, surge protection, or smart monitoring can increase the price .

- Compliance and safety standards: Units meeting BS 5733 or other safety standards may carry a premium due to testing and certification .

Typical Costs

- Basic 4-way or 6-way units: Approximately £50-£120, suitable for small corridors or residential applications .
- Mid-range 8-way units with metal enclosures: Around £120-£200, offering better durability and flexibility for commercial corridors .
- High-end or expandable units: £200-£300+, including features like DALI control, modular expansion, or premium materials .

Installation Considerations

Professional installation is recommended to ensure compliance with electrical regulations and optimal performance. Costs for installation vary depending on wiring complexity, mounting requirements, and integration with existing lighting systems .

Summary

When budgeting for a corridor lighting distribution box, consider capacity, material, safety compliance, and additional features. A typical range is £50-£300, with higher-end units offering modularity, advanced control, and enhanced durability for commercial or high-traffic corridors .
