

Huawei MWC optical module

Overview

Huawei Unveils StarryLink Optical Modules That. [Barcelona, Spain, March 4, 2025] At MWC Barcelona 2025, Huawei introduced the StarryLink optical module.

Key Takeaways

Huawei unveiled advanced StarryLink and single-wavelength 2T optical modules at MWC 2025 and 2026, enhancing data center and high-capacity network performance. StarryLink Optical Modules (MWC 2025)

At MWC 2025, Huawei introduced the StarryLink optical modules, designed to improve network performance with "3S" quality: Spanning, Stable, and Secure . These modules address key challenges in modern data centers:

- **Transmission Distance:** Optimized optical path coupling doubles the transmission distance compared to industry averages.
 - **Reliability:** Enhanced design reduces failures and contamination risks.
 - **Security:** Protects sensitive data during cross-equipment interconnections.
- StarryLink modules support high-speed interconnections, evolving from 56 Gbit/s to 112 Gbit/s per lane, meeting the growing demands of AI-driven data center traffic .
- Single-Wavelength 2T Optical Solution (MWC 2026)

At MWC 2026, Huawei unveiled the world's first single-wavelength 2 terabit-per-second (2T) optical solution . Key features include:

- **Multi-Rate Flexibility:** Supports 800G, 1.2T, 1.6T, and 2T on the same hardware, allowing adaptation to different network reach and capacity requirements.
- **Extended Transmission Distance:** Achieves 30% longer reach than industry averages, reducing the need for regeneration points and amplifier sites.
- **Submarine Cable Support:** Capable of rates beyond 1T per wavelength over tens of thousands of kilometers, lowering per-bit costs for global backbone networks. This solution is particularly suited for data center interconnects (DCI) and metro-area high-density networks, addressing the surge in AI-generated traffic.

AI Data Center Optical Modules

Huawei also launched high-speed StarryLink optical modules for AI data centers, integrated into the Xinghe AI Fabric 2.0 Solution . Highlights include:

- 800GE and 400GE modules with twice the reliability and extended range.
 - Integration with 51.2T liquid-cooled switches, enhancing AI-driven data center performance.
 - Support for automation, efficiency, and resilience in large-scale AI workloads.
- Enterprise and Industry Applications

Beyond data centers, Huawei's optical solutions support:

- iFTTO and next-gen FAN networks for campus and home networks.
- Fiber sensing solutions for transportation and manufacturing sectors.
- AI-enabled network intelligence for ISPs and enterprise digital transformation .

Summary

Huawei's MWC optical module innovations demonstrate a clear focus on high-speed, reliable, and secure optical networking. From StarryLink modules for data centers to the groundbreaking single-wavelength 2T solution, these technologies address the growing demands of AI traffic, long-distance transmission, and enterprise digital transformation, positioning Huawei at the forefront of optical transport evolution.
