

Huijue Non-PoE Switch

Overview

A PoE switch consists of networking devices which can supply power and transmit data via an ethernet cable simultaneously.

Key Takeaways

The Huijue (Ruijie) RG-ES108GD is an 8-port 10/100/1000Mbps unmanaged Non-PoE switch designed for reliable, cost-effective networking without Power over Ethernet. Key Features

- Ports and Speed: 8 RJ45 ports supporting 10/100/1000Mbps Gigabit Ethernet, suitable for high-speed data transmission in small to medium networks .
 - Non-PoE Design: Does not provide Power over Ethernet, so connected devices require separate power sources .
 - Unmanaged Switch: Simple plug-and-play operation with no configuration required, ideal for offices or enterprise networks where advanced management is not needed .
 - Cloud Visibility: Although unmanaged, the switch can be monitored via Ruijie Cloud if at least one managed switch exists on the network .
 - Hardware Flow Control: Large buffer ensures smooth data transmission and reduces packet loss during high traffic .
 - High Reliability: Designed for stable network performance and long-term operation .
- Applications
- Small Office Networks: Connect multiple computers, printers, and other network devices without PoE requirements.

- CCTV Installations: Suitable for small-scale surveillance setups where cameras have independent power sources .

- Enterprise Expansion: Can be used to extend existing networks without adding PoE complexity.

Advantages of Non-PoE Switches

- Cost-Effective: Lower price compared to PoE switches since no power delivery circuitry is included .

- Flexibility: Devices can be powered independently, allowing use with equipment that does not support PoE.

- Simplicity: Easy to deploy and maintain, especially in networks that do not require centralized power management . The RG-ES108GD is a practical choice for users seeking a reliable, unmanaged, Gigabit Non-PoE switch for small to medium network environments, offering both performance and simplicity without the additional cost of PoE functionality .
