OM3 and OM4 fiber optic patch cords

Overview

Leviton fiber optic patch cords meet or exceed industry standards to make sure you get the performance you expect.

Key Takeaways

The key difference between OM3 and OM4 patch cords lies in bandwidth and transmission distance: OM4 offers an Effective Modal Bandwidth (EMB) of 4700 MHz·km — more than double OM3's 2000 MHz·km — and supports 100G Ethernet over 150 meters, compared to just 100 meters for OM3. Leviton fiber optic patch cords meet or exceed industry standards to make sure you get the performance you expect. They are available in multimode (OM1, OM3, OM4, OM5) and single-mode (OS2) fiber types, with a range of SC, ST and LC connectors. Available in different lengths and connector options, they offer stable and durable data transmission, ideal for high-density environments and applications requiring high-quality connections. The actual supported reach also depends on the electrical and op or by phone: 800. One or both ends of the patch cord are equipped with standardized fiber optic connectors, and common interfaces include LC, SC, FC, ST, etc.
