OPGW optical cable specifications are complete

Overview

OPGW tests shall be in accordance with applicable standards or agreements between purchaser and manufacturer.

Key Takeaways

OPGW cables combine overhead ground wire functionality with integrated optical fibers, designed for mechanical strength, electrical grounding, and reliable data transmission.

Construction and Design

OPGW cables consist of optical fibers enclosed in a hermetically sealed metallic tube, typically made of aluminum or stainless steel, which is then surrounded by one or more layers of aluminum, aluminum-clad steel, or alloy wires for mechanical protection and electrical conductivity. The optical sub-units can be configured as tight structure (most rugged) or loose tube with gel filling, depending on fiber count and environmental conditions. Color-coded buffer tubes simplify splicing and maintenance.

Mechanical Properties

- **Rated Tensile Strength (RTS):** Typically ranges from 49 kN to over 100 kN, ensuring the cable can withstand wind, ice, and other mechanical stresses.
- **Breaking Load:** Must be sufficient to handle installation tension and environmental loads without permanent deformation.

- Diameter and Weight: Nominal overall diameter is usually ≤ 14.5 mm, with a mass of
