Power strip placed on cable tray

Overview

Cable Tray Installation Rules (NEC 392) – Electrical TraderWhen power and signal cables share the same tray, solid dividers should be installed to A Guide.

Key Takeaways

A power strip can be safely mounted on a cable tray using zip ties, Velcro straps, or clamp-on trays, ensuring secure attachment, proper airflow, and easy access.Methods for Mounting a Power Strip on a Cable Tray

1. Using Zip Ties or Velcro Straps: If your cable tray has slots or holes, you can loop zip ties or Velcro straps through these openings and around the power strip. Tighten them firmly to secure the strip without drilling or permanent modifications. This method is flexible, inexpensive, and allows easy adjustments or removal of the power strip when needed . 2. Clamp-On Power Strip Trays: Products like the VIVO clamp-on tray provide a sturdy solution for holding power strips off the floor. These trays attach to the desk or cable tray using heavy-duty clamps, supporting up to 11 lbs and allowing airflow to prevent overheating. They also hide cables for a clean appearance and make plugging and unplugging devices easier . 3. Integrated Cable Management Kits: Some systems, such as the Steelcase Universal Cable Management Kit, allow mounting multiple power outlets within a hinged tray under the desk. These trays can accommodate UL-listed power strips and keep cords compact while providing easy access when needed .

Safety and Practical Considerations

- Weight Limit: Ensure the cable tray or clamp can support the weight of the power strip and connected devices. Most under-desk trays handle 8-11 lbs safely .

- **Airflow:** Use trays with open or ventilated designs to prevent heat buildup around the power strip .
- **Accessibility:** Position the strip so that plugs are easy to reach without stretching cords or creating tension.
- **Cable Organization:** Route cables neatly through the tray to avoid tangling and reduce tripping hazards. Mesh or open-wire trays allow threading excess cords between wires for a tidy setup .
- **Avoid Overloading:** Do not exceed the power strip's rated capacity, and ensure the tray does not obstruct ventilation or create fire hazards .

Summary

Mounting a power strip on a cable tray is a practical way to organize cables, improve safety, and maintain a clean workspace. Using zip ties, Velcro straps, clamp-on trays, or integrated cable management kits ensures secure attachment, proper airflow, and easy access while keeping cords off the floor and reducing clutter .
