Price list for upgraded silicon photonics technology for data center interconnects

Overview

Silicon Photonics Data Center Interconnects Market Research Report The global silicon photonics data center interconnects market was valued at \$3.11 billion.

Key Takeaways

Silicon photonics modules for data center interconnects typically range from several hundred to several thousand dollars per transceiver, depending on speed, integration, and volume. Cost Factors

The price of silicon photonics technology is influenced by several key factors:

- **Data Rate and Bandwidth:** Transceivers supporting 100G, 400G, or 800G speeds have higher costs due to more complex modulators, photodetectors, and wavelength-division multiplexing components .
- **Integration Type:** Co-packaged optics (CPO) that integrate optical engines directly with switch ASICs or processors are more expensive than standard pluggable modules because of tighter thermal management and packaging requirements .
- **Volume and Manufacturing:** Silicon photonics leverages CMOS fabrication, but initial design and prototyping costs are high. Large-scale production reduces per-unit cost, but lead times can extend to months .

- **Component Complexity:** Active PICs with modulators and photodetectors cost more than passive chips with only waveguides and splitters . Lasers, often hybrid-integrated, are a significant cost contributor .
- **Supplier and Region:** Major suppliers like Intel, Cisco, MACOM, Lumentum, and GlobalFoundries offer different pricing based on service, support, and regional market dynamics . North America and China dominate production and adoption, affecting pricing trends .

Estimated Price Ranges

While exact prices vary by supplier and contract, industry sources suggest approximate ranges:

- 100G transceivers: \$300-\$800 per module
- 400G transceivers: \$1,000-\$2,500 per module
- 800G transceivers and co-packaged optics: \$3,000-\$6,000 per module, depending on integration and volume These prices reflect high-performance, AI-focused data center interconnects, where energy efficiency and low latency are critical. Silicon photonics modules can reduce power consumption by up to 60% compared to copper interconnects, which can justify higher upfront costs in hyperscale deployments .

Market Trends Affecting Pricing

- **Rapid AI Workload Growth:** Increasing demand for multi-terabit throughput in GPU clusters and large language model training is driving adoption and potentially higher prices in the short term .
- **Economies of Scale:** As production scales and more suppliers enter the market, prices are expected to gradually decrease over the next 3-5 years .
- **Technological Advancements:** Emerging materials (e.g., TFLN, BTO) and programmable photonics may increase initial costs but offer higher performance and integration density . In summary, while silicon photonics for data center interconnects is currently a premium technology, prices are expected to become more competitive as adoption grows and manufacturing matures. Buyers should consider both per-unit cost and operational savings from reduced power consumption and improved bandwidth efficiency.

Silicon Photonics Optical Interconnects for AI Data Centers Market ...

Silicon photonics optical interconnects for AI data centers market was valued at \$2.3 billion in 2025, projected to

Silicon Photonics Optical Interconnects Market Research Report 2034

The global silicon photonics optical interconnects market is forecast to grow from \$3.69 billion in 2025 to \$33.8 billion

Silicon photonics and the future of optical connectivity in the data center

The bandwidth growth inside data centers has driven significant innovations in networking and optical connectivity. We'll review

Silicon photonic interconnection networks for data centers

Silicon photonics devices can be fabricated using present CMOS fabrication techniques and therefore this technology is

Advances in silicon photonics for high-capacity optical

Abstract. We review our recent progress on advanced silicon photonic devices and photonic circuits, including advanced grating

STMicroelectronics Enhances Optical Interconnects for Faster AI and ...

This is the right time for ST to introduce new power efficient silicon photonics technology and complementing it with a

Data Center Photonics Market 2026 to 2034

The focus on energy efficiency and miniaturization in data centers further supports the adoption of innovative optical

Co-Packaged Optics, Silicon Photonics Boost AI Data Center

This post takes a close look at the latest forecast for optical interconnects in AI data centers. It dives into market
