

RIVO MULTITRADE OPTICAL SYSTEMS

Remove the MPO jumper from the optical module

Overview

MPO optical module optical fiber jump advantage Bundle or tie the jumpers to keep the panel looking tidy, however, bundling or tying the jumpers too tightl.

Key Takeaways

To safely remove an MPO fiber optic jumper, gently pull it straight out from the module without bending, twisting, or applying excessive force, ensuring the connectors and fibers remain undamaged.

Step-by-Step Removal Process

- Power Down or Isolate the Port Before handling the MPO jumper, ensure the optical module or port is powered down or isolated to prevent accidental signal disruption or damage.
- Inspect the Jumper and Connector Check the MPO jumper for any visible damage, kinks, or debris. Ensure the connector end is clean and free of dust or oils, as contamination can damage the module or fiber during removal .
- Release Any Securing Mechanisms Some optical modules or MPO fan-out units may have clips, latches, or covers holding the jumper in place. Carefully release these mechanisms without forcing them .
- Pull the Jumper Straight Out Grasp the MPO connector by its housing (not the fiber itself) and pull it straight out from the module. Avoid bending the fiber sharply or twisting the connector, as MPO fibers are sensitive to stress and can be damaged if bent beyond their minimum radius .

- **Handle the Jumper Carefully** Once removed, place the jumper on a clean, static-free surface or re-cap the connector with a dust cap to prevent contamination. Avoid stepping on or tangling the fiber .
 - **Label and Document** If the jumper will be reinstalled elsewhere, label it and note its original port connections to maintain proper network documentation and polarity .
- Additional Tips**
- **Maintain Minimum Bend Radius:** MPO jumpers typically require a bend radius of at least 10 times the cable diameter to prevent signal loss or fiber breakage .
 - **Avoid Excessive Force:** If the jumper does not slide out easily, check for latches or obstructions rather than pulling harder .
 - **Clean Connectors Before Reuse:** If the jumper will be reconnected, clean the MPO ferrule using a proper fiber cleaning pen or cassette cleaner to remove dust and oils . Following these steps ensures the MPO jumper and optical module remain in optimal condition, preventing signal degradation and physical damage.
