

RIVO MULTITRADE OPTICAL SYSTEMS

Solution Passive Optical Network 10G

Overview

Semtech's PON-X family delivers high-performance analog laser drivers, TIAs and CDR products for passive optical networks.

Key Takeaways

10G PON (XGS-PON) delivers symmetrical 10 Gbps fiber broadband, supporting high-capacity, multi-subscriber networks with co-existence options for legacy GPON systems. Overview of 10G PON

10G PON, commonly implemented as XGS-PON (ITU-T G.9807.1), is a symmetrical 10 Gbps optical access technology designed for fiber-to-the-premises (FTTP) deployments. It provides high-capacity connections to multiple subscribers over a single fiber, supporting residential, enterprise, and multi-dwelling unit (MDU) environments. XGS-PON uses wavelength-division multiplexing (WDM) to separate upstream and downstream traffic, enabling co-existence with legacy GPON networks without replacing existing optical distribution infrastructure.

Key Features

- Symmetrical 10 Gbps speeds for both upstream and downstream traffic.
- Co-existence with GPON and NG-PON2 on the same fiber, allowing gradual network upgrades.
- Extended reach and split ratios, supporting more subscribers per OLT port compared to GPON.

- Standards compliance: XGS-PON follows ITU-T G.9807.1, ensuring interoperability across vendors .

- Flexible deployment: Supports dense urban, suburban, and greenfield networks, with options for immediate 10G deployment or migration from 1G/2.5G PON .

Equipment and Vendor Solutions

- Optical Line Terminals (OLTs): Centralized devices at the service provider site that manage multiple Optical Network Terminals (ONTs). Vendors like Nokia, Juniper, Cisco, and Zhone provide OLTs capable of running 10G, 25G, and 50G PON simultaneously .

- Optical Network Terminals (ONTs): Subscriber-side devices that terminate the fiber and provide Ethernet or routed interfaces. Cisco 10G Routed PON ONTs integrate XGS-PON optics, MAC, and Ethernet switching for flexible deployment .

- Co-existence solutions: Nokia and Zhone offer technologies that allow XGS-PON to operate alongside GPON, using distinct wavelengths (e.g., 1577 nm downstream for XGS-PON vs. 1490 nm for GPON) to avoid interference .

- Unified PON solutions: Juniper's Unified PON integrates 10G PON with existing Ethernet services, supporting migration from legacy FTTx networks and interoperability with third-party ONTs .

Deployment Considerations

- Migration strategy: Operators can deploy 10G PON incrementally, co-existing with GPON to protect existing infrastructure investments .

- Service flexibility: 10G PON supports multiple service types, including residential broadband, mobile backhaul, and enterprise connectivity .

- Future-proofing: Networks can evolve from 10G to 25G or 50G PON as demand grows, ensuring scalability and competitive advantage .

- Operational efficiency: XGS-PON reduces operational costs by simplifying upgrades, minimizing footprint, and supporting high-density deployments .

Summary

10G PON (XGS-PON) is a high-speed, scalable, and interoperable fiber access solution that enables service providers to deliver multi-gigabit broadband efficiently. With co-existence capabilities, flexible OLT/ONT options, and vendor-supported migration paths, operators can upgrade existing networks without service disruption, meet growing bandwidth demands, and prepare for next-generation PON technologies .
