

Standard Colors for Distribution Box Markings

Overview

Color Standard for Primary Distribution BoxesThe IEC 60446 standard, “Basic and Safety Principles for Man-Machine Interface, Marking, and Identification,”.

Key Takeaways

Distribution boxes and electrical panels are marked using standardized color codes to indicate phase, neutral, ground, and utility types, ensuring safety and clear identification.IEC Color Codes for Electrical Wiring

For AC supply in Europe and countries following IEC standards:

- Brown – Line/Phase 1 (L1)
- Black – Line/Phase 2 (L2)
- Grey – Line/Phase 3 (L3)
- Blue – Neutral (N)
- Green with Yellow Stripe – Protective Earth/Ground (PE) For DC supply:
- Brown – Positive (+) in ungrounded circuits
- Grey – Negative (–) in ungrounded circuits

- Green with Yellow Stripe – Ground/Earth The exact assignment in grounded DC circuits depends on whether the positive or negative conductor is grounded, but the protective conductor always uses green/yellow .

APWA Utility Marking Colors (U.S.)

For utility distribution boxes and underground infrastructure, the American Public Works Association (APWA) standard uses:

- Red – Electric power lines, cables, conduit
- Orange – Communication lines (fiber optic, phone, cable)
- Yellow – Gas, oil, steam pipelines
- Blue – Potable water mains
- Purple – Reclaimed or recycled water
- Green – Sewer, stormwater, or drainage systems These colors are applied to permanent markers, paint, or flags to prevent accidental strikes and ensure safety during excavation or maintenance .

ITU-T L.1203 for Telecom/DC Distribution

In telecom and ICT installations, ITU-T L.1203 recommends color and marking identification for DC power distribution:

- Supports –48 VDC and up to 400 VDC systems
- Ensures clear differentiation between AC and DC circuits
- Uses color coding to prevent misconnection and improve safety in high-density ICT power systems .

Key Considerations

- Consistency: Always follow the relevant local or international standard for your region.
- Labeling: Terminals and conductors should be marked with function, voltage, or phase symbols (e.g., L1, L2, L3, N, +, –, □).
- Safety: Green/yellow is exclusively reserved for protective earth to avoid confusion.
- Documentation: Maintain schematics and labeling to facilitate maintenance and troubleshooting . By adhering to these color standards, distribution boxes are clearly identifiable, reducing the risk of electrical hazards, miswiring, and utility damage.
