

US Active Optical Module SFP

Overview

Cisco 10GBASE SFP+ Modules Data Sheet Cisco SFP+ Active Optical Cables (Figure 5) are direct-attach fiber assemblies with SFP+ connectors. They are suitable.

Key Takeaways

Active Optical SFP modules (AOCs) are hot-pluggable transceivers that convert electrical signals into optical signals for high-speed fiber connectivity, supporting data rates from 10G to 25G and beyond. Overview of SFP and Active Optical Modules

SFP (Small Form-factor Pluggable) modules are compact, hot-swappable transceivers used in switches, routers, and servers to connect to fiber or copper networks. Active Optical Cables (AOCs) are a type of SFP module that integrate optical transceivers with a fiber cable, providing longer reach and higher performance than passive copper cables while maintaining low power consumption. They are widely used in data centers, enterprise networks, and high-performance computing environments.

Key Features

- Hot-pluggable: Can be installed or replaced without powering down the device.
- High-speed support: SFP+ supports 10 Gbps, SFP28 supports 25 Gbps, and modern AOCs can scale to 100G aggregation.
- Digital Diagnostics Monitoring (DDM/DOM): Provides real-time monitoring of temperature, voltage, and optical transmit/receive power for proactive maintenance.

- Interoperability: Compliant with IEEE standards (e.g., 802.3by for 25G) and Multi-Source Agreements (MSA), allowing modules from different vendors to be physically interchangeable, though electrical and optical compatibility must be verified .

Applications and Performance

- Data center connectivity: AOCs are ideal for short- to medium-range connections within racks or across adjacent racks, offering cost-effective high-speed links .
- Link lengths: Cisco 10GBASE-SR modules support up to 400 meters over OM4 multimode fiber, while 25G SFP28 AOCs typically support 1–10 meters for direct-attach fiber connections .
- Industrial and extended temperature options: Certain modules, like Cisco SFP-10G-SR-I, support industrial temperature ranges for harsh environments .

Selection Considerations

When choosing an active optical SFP module, consider:

- Data rate compatibility: Ensure the module matches the switch or router port speed (10G, 25G, etc.), .
- Fiber type: Match multimode (OM3/OM4) or single-mode fiber to the module specifications .
- Distance requirements: Verify the maximum supported link length for your deployment .
- DDM/DOM support: For monitoring and predictive maintenance .
- Vendor certification: Using certified modules ensures reliability and avoids host port rejection .

Summary

Active Optical SFP modules are essential for modern high-speed networks, providing reliable, hot-swappable fiber connectivity with real-time diagnostics. They are available in multiple speeds (10G SFP+, 25G SFP28) and form factors, supporting both short-range and extended-range applications in enterprise and data center environments. Proper selection ensures compatibility, optimal performance, and network uptime .
