Key Takeaways

A small electrical distribution box typically costs between \$150 and \$500 for the unit alone, with total installed costs ranging from \$800 to \$1,500 depending on labor and additional components. Price Range and Factors

The cost of a small distribution box depends on several factors:

- **Enclosure Material:** Basic ABS plastic boxes are the most affordable, while powder-coated steel or stainless steel enclosures increase the price significantly .
 - **Internal Components:** An empty box is cheaper, but adding circuit breakers, surge protectors, and busbars raises the cost .
 - **Amperage and Number of Circuits:** Standard residential boxes (100-125 A) with 6-12 spaces are generally in the \$150-\$400 range for the unit, while higher amperage or more spaces increase the price .
 - **Smart Features:** Modern smart distribution boxes with monitoring and energy management capabilities can cost roughly double a traditional panel .
- Installation Costs

Professional installation is a significant part of the total cost:

- Residential Installation: Typically \$1,300–\$1,800 for a standard upgrade, including labor, wiring, and permits .
- Complex or Industrial Installations: Can involve weeks of labor and additional fees, potentially raising total costs to several thousand dollars .

Buying Tips

- Future Expansion: Choose a box with extra spaces to avoid replacing it later .
- Safety and Compliance: Ensure the box meets local standards (UL, CE, or CCC) and has the appropriate IP rating for its environment .
- Quality Components: Avoid low-quality enclosures that may corrode or fail, especially in humid or coastal areas .

Summary

For a small residential distribution box, expect to pay \$150–\$500 for the unit, with total installed costs typically \$800–\$1,500. Prices vary based on materials, amperage, number of circuits, and whether smart features are included. Investing in quality components and professional installation ensures safety, reliability, and long-term value .
