

What is an ODN fiber optic connector

Overview

An Optical Distribution Network (ODN) is the passive fiber infrastructure that connects the Optical Line Terminal (OLT) in the central office to the Optical Network Unit (ONU/ONT) at the subscriber side. Unlike active equipment, the ODN does not require electrical power. It links your service provider to your house with fiber cables. These cables carry light signals to send data. In addition, the transmission between OLT and ONU/ONT adopts an optical. A Gigabit Ethernet Passive Optical Network (GEPON) system is generally composed of an optical line terminal (OLT) at the service provider's central office and a number of optical network units (ONUs) or optical network terminals (ONTs) near end users, as well as the optical splitter.
