

What is an electronic intelligent power distribution box

Overview

An Intelligent Power Distribution Unit (iPDU), also known as a Smart PDU or Intelligent PDU, is a critical component in modern data center infrastructure. iPDUs serve as a centralized power management solution that enhances the efficiency, reliability, and monitoring capabilities. As the "capillary" of the power supply system, the power distribution network ensures the last mile of power supply. The distribution network features numerous points, vast areas and complex environment, and faces problems such as high line loss, low reliability of power supply, frequent power. Intelligent power distribution box is composed of traditional leakage protector, air switch, AC contactor and KC868-H8. Compared with the traditional power distribution box, it is safer to cut off the strong power supply remotely, and it can save energy through the timing mode while controlling the. Our intelligent and mechanical boxes in the area of power and data distribution offer modular solutions for all voltage levels and at the same time optimize functionality - for maximum efficiency with maximum safety. Whether that means speeding up Saturday installs or focusing on. Wieland is your experienced and reliable partner for efficient, pluggable and decentralized electrical installation.
